EagleEyeERP

PROVIDES A SOLUTION UNMATCHED IN COMPARISON TO OTHER PRODUCTS.

DUAL USER INTERFACE

EagleEyeERP has multiple views available depending on your employee.

We know how hard it can be when there is too much information displayed on a screen. The simplified shop interface allows shop floor employees to quickly identify what task to start, where their next responsibility is, and when it was made available to them. Management can select which specific operations are available per employee, merging across departments, or they can access departments they are qualified in as they move from position to position.

PRODUCTION VISIBILITY

Knowing what your team is working on and what is pending is a priority.

Keeping track of your team and what current operations are being processed is vital to any production team.

Track all activity in one page
With the "Workcenter" report, you have up-to-date real-time information on what your team is working on as well as what is pending and what has been completed. You can also see what is currently in progress and how long an employee has been working on any task.

IN-DEPTH REPORTING

Accessing individual reports or access history has never been easier.

The workcenter allows you a real-time snapshot of what employees are working on what tasks. You can view recent history of the completed tasks, who completed them, and when they were completed.

Timecard Reporting

EagleEyeERP was designed with the goal of a Single Source of Truth - with that, you can view employee timecard reports directly within the system.

Tracking Sales Leads

Viewing and working with sales leads has never been easier. See their status, hide the leads that have been completed, and create a curated report based on what you need now.

AVAILABLE EVERYWHERE

Hosted in the cloud, *EagleEyeERP* is available anywhere and everywhere you can access the internet.

Access your systems anywhere, wired or wireless, on a tablet (8" screen or larger), touchscreen PC, laptop, or desktop computer. *EagleEyeERP* was designed to be always-on and always ready for production with zero downtime.

Finally an ERP system that is easy to setup, easy to use and requires minimal training. We designed our software for the real world of cabinetry and closets with real people in mind.

AUTOMATED SALES CYCLE

Sales leads are no longer lost due to inability to keep track of them.

With one single report you can see all sales leads and filter it down to exactly what you want, when you want it. You can follow up on a lead directly, log notes and verify that every step has been completed from a single page.

CUSTOM REPORTING

Custom reports built by you, for you.

Reports customized directly in the reporting tool allow management, supervisors and staff to review performance.

- ✓ Managed Production Whether Cutting By Hand Or Cnc Nests.
- ✓ Simple, Integrated & Automated
- ✓ Online Access: Wired, Wireless & Remote

- ✓ Dealer/Customer Portal Module Available
- ✓ No In-House "IT" Professional Required
- ✓ A Tool To Manage Your Company, Not Another Tool That Has To Be Managed

TOUCHSCREEN PC, MAC, TABLET

Available as touchscreen for PC, MAC and Tablet (8" screen or larger).

EagleEyeERP allows you to access and work using any device that fits your work-style. Most features are available on mobile phones, however not all features are guaranteed to function.

USER CONTROL

Personalize and curate unique user accounts. A variety of user levels are provided allowing complete control over information within the system. Each user can be granted access to modules or unique views, based on their role within the company.

Easy to use from small to large scale environments

For every size company from a small shop to a large-scale manufacturing environment, we provide a solution. No matter the size of your cabinet or closet business, information is organized and easy to access. Every step is available from the very first customer contact to the final invoice.
